

DynaCompliance

From a Dynatrace alert to a DORA-filed report in 90 seconds — human-approved.

Google Cloud Rapid Agent Hackathon · **Dynatrace** track

● Live: dynacompliance-908307939543.europe-west1.run.app

The problem

EU **DORA** is in force for financial entities.

A **major** ICT incident → **4-hour** early-warning filing to the regulator.

Today: manual, **~47 minutes**, error-prone — and the clock starts at **detection**.

The idea

An agent that **detects** → **classifies** → **drafts** → **schedules** → **proposes**,
and files **only with human approval**.

Built on the required stack — all three live at runtime:

- 🧠 **Gemini 3** (`gemini-3-flash-preview`) — rationale + EBA drafting
- 🏗️ **Google Cloud Agent Builder / ADK** (`@google/adk`) — the agent loop
- 📊 **Dynatrace MCP** (`@dynatrace-oss/dynatrace-mcp-server`) — 20 live tools

Operations Center

- Live Dynatrace feed — **3 incidents, 1 MAJOR**
- Article 19 **countdown** started at **detection**
- Each incident pre-triaged by the agent

Major ICT Incident

ENTITY IDENTIFIER

DYNA-BANK-NL-

EBA EARLY-WARNING

ART. 19 EARLY-WARNING
Entity: [Financial Institution]
2026-047. Start of early warning at 11T00:47:43.249Z
Acquiring & Settlement Process
(Payment Process)
15.2% clients affected
value. Preliminary

The verdict

- **MAJOR** — €8.3M > €5M, payments down > 30 min
- **Article 28** flagged — third-party root cause
- Davis AI root cause · **Gemini 3** rationale
- Deterministic thresholds → defensible, reproducible

#1 EARLY WARNING2:59:1706:53 CET

#2 INTERMEDIATE (72h)14 Jun, 02:53

#3 FINAL REPORT (~1 month)11 Jul, 02:53

Classification Reasoning

ART.18 CRITERION 1Transaction value €8.3M > €5M

ART.18 CRITERION 2Payment processing down >30min

ADDITIONAL OBLIGATIONDORA Article 28 (ICT third-party risk)

Agent Rationale (Gemini 3)
This incident is classified as MAJOR because it triggers Article 18 thresholds for economic impact, with transaction values of €8.3M exceeding the €5M limit, and service downtime, as payment processing was unavailable for 47 minutes (threshold 30 minutes). Furthermore, the incident involves a critical ICT third-party provider, necessitating a high-priority notification under DORA requirements.

Notification Draft (DORA Template v2.4)Edit Draft

INCIDENT SUMMARY (EDITABLE)

NOTIFICATION OF MAJOR ICT INCIDENT (DORA Art. 19 Early Warning). Reporting Entity: [Financial Entity Name]. Incident Reference: INC-2026-047. Start Time: 2026-06-11T00:47:43Z. Impact Details: 15.2% of clients affected; €8,300,000 transaction value impacted. Affected Services: Payment Processing (Acquiring & Settlement) and Card Authorization. Preliminary Root Cause: ICT Third-Party failure (AWS RDS connection pool exhaustion).

REGULATORY BODYDNB (De Nederlandsche Bank)

PRIORITYCRITICAL / MAJOR

Compliance Validation
Draft includes all mandatory fields for the EBA/GL/2021/03 incident reporting guideline. Write-back + submission are gated on your approval.

The human gate

- The agent **proposes**; it never files alone
- `/api/execute` → **403** without approval, **400** without an approver
- Every approval → **signed, append-only audit** record

Responsible AI you can show a regulator.

It's a real agent — the proof

`POST /api/classify-agent` = **ADK + Gemini 3 + Dynatrace MCP** in *one* loop.

- Returns `mcp_tools_called` → receipts that the MCP server actually ran
- `/health`: `gemini_live` · `partner_mcp_connected` **(20 tools)** · `agent_builder`

| Not three logos in a README — three technologies firing at runtime.

Impact & honesty

- **~90s vs ~47min** — defensible, auditable, human-approved
- **No competing AI/cloud** — Google + Dynatrace only
- Honest boundaries: detection-time clock is a conservative simplification of DORA's "classification-as-major" anchor; live metric mapping is next

DynaCompliance

Gemini 3 for reasoning · Dynatrace for the eyes · Agent Builder for the spine.

A **47-minute** scramble → a **90-second**, auditable, human-approved filing.
